DAVID UREÑA

FULL-STACK SOFTWARE DEVELOPER | NODE.JS, REACT & POSTGRESQL

San José, Costa Rica | +506 8403 1466 | josue.calderon.urena@gmail.com | david.norastudio.digital | LinkedIn

PROFESSIONAL SUMMARY

Full-stack developer who builds and deploys production web applications end to end with Node.js, Express, React and PostgreSQL. Delivered an electronic invoicing platform with audit logging and Zoho Mail integration, a corporate website scoring 100/100 on Google PageSpeed, a WiFi and camera coverage-planning tool, and a full-stack casino platform deployed to the cloud. Automates business workflows with LLMs, Python and RPA. B.S. in Software Development in progress, with Java foundations. English B2.

TECHNICAL SKILLS

Backend & Frontend: Node.js, Express, REST APIs, React, TypeScript (working proficiency), JavaScript, HTML5, CSS3, Astro; Java (OOP fundamentals) and C# / ASP.NET (foundations)

Data & Architecture: PostgreSQL, SQL, Prisma ORM, Supabase, relational modeling, authentication (JWT, bcrypt) and role-based authorization (IAM and RBAC concepts), audit logging, cron-based background jobs

Delivery & Cloud: Git, HTTP, Vercel, Render, Hostinger VPS, AWS (EC2 and console; learning Lambda, S3, CDK), cybersecurity fundamentals

AI-Assisted Engineering & Automation: Claude Code, LLM workflows, prompt engineering, Python web scraping, UiPath Studio (RPA)

Marketing & Analytics: Google Tag Manager, GA4, Google Ads

Soft Skills: Communication with clients, sales and technical teams; problem solving; fast learning; adaptability; time management

PROFESSIONAL EXPERIENCE

Software Developer (employee & contractor via NORA Studio) | NGN Costa Rica | San José, Costa Rica | Feb 2026 – Oct 2026

- Built and deployed Comprobantes CR, an internal invoicing platform (Node.js, Express, Prisma, PostgreSQL). A cron-driven mail watcher polls the Zoho Mail REST API incrementally, keeping its progress in a configuration table, and parses Costa Rican tax-authority (Hacienda) XML invoices; equipment is classified by CABYS code, with a leads module and audit logging.
- Built and maintained the company website in Astro as a static site (100/100 on Google PageSpeed) served from a VPS behind Cloudflare; set up GTM, GA4 and Google Ads tracking and removed a legacy GA4 tag.
- Designed AI-assisted lead-generation workflows (Python web scraping and LLM pipelines) that turned manual prospecting into repeatable processes.
- Managed Google Ads campaigns structured by business line, with GTM/GA4 integrations and AI-agent reporting, and planned content strategy for the company's social page (~10,000 followers).

Founder & Freelance Web Developer | NORA Studio | Costa Rica | Ongoing

- Design and build responsive websites for small businesses in Costa Rica with HTML, CSS and JavaScript, improving performance and SEO structure.
- Handle client requirements, quotes and delivery directly with business owners.

RPA Development Intern | Eagle Understanding | Sep 2025 – Dec 2025

- Built UiPath Studio automation workflows to streamline business processes, adding exception handling and logging to improve stability.

IT Support Intern | All In Tec | 2024

- Provided remote and on-site support for Windows systems: troubleshooting and software installation and maintenance.

SELECTED PROJECTS

Full Portfolio & Demos: david.norastudio.digital

VirtualBet — Full-Stack Virtual Casino & Sportsbook | Node.js, Express, Prisma, PostgreSQL, Supabase, Vercel, Render

- Designed the REST API (Express, Prisma, PostgreSQL) with JWT and bcrypt authentication and a wallet/ledger model that stores every balance change as a transaction; six casino games (Crash, Mines, Blackjack, Keno, Plinko, CoinFlip) run server-side with RNG, house-edge and payout logic, and game state such as Blackjack hands is persisted in the database.
- Automated the sportsbook: cron jobs import fixtures and results from the TheSportsDB API, lock matches when they start and expire pending P2P invitations; P2P pools charge a house commission and each invitee chooses their own pick and stake.
- Diagnosed production issues across the stack (a UTC vs UTC-6 time-zone bug that hid matches, an Express route-order conflict returning 404s), audited the codebase with Claude Code and shipped improvements in planned sprints on Render, Vercel and Supabase. Virtual currency only, no real money.

NGN Coverage Designer — WiFi & Camera Coverage Planner | React, TypeScript, Vite, Konva, Node.js, PostgreSQL

- Built the simulation engine on a log-distance path-loss model with per-material wall attenuation and configurable parameters, rendering WiFi signal heatmaps and camera field-of-view cones over floor plans drawn on a canvas editor.
- Separated a client self-quoting view from an internal NGN technical view with role-based access; costs and margins stay on the backend only. Generates automatic quotes and image/PDF exports.

NORA — Full E-Commerce Store | Node.js, Express, PostgreSQL, Prisma, Tilopay, VPS

- Built an online fashion store with Node.js, Express, PostgreSQL and Prisma, including the Tilopay payment gateway, an admin panel and self-managed VPS hosting.

EDUCATION, CERTIFICATIONS & LANGUAGES

B.S. in Software Development (in progress) | Universidad Fidélitas | Costa Rica | 2026 – Present. Coursework: Java OOP (classes, encapsulation, constructors, enums)

Technical Diploma in Web Development | Colegio Técnico Profesional de Educación Comercial y Servicios | 2023 – 2025

Cisco: IT Essentials, Cybersecurity Essentials, Python Essentials, Data Science Essentials, English for IT 1 & 2

Spanish: Native | **English:** B2
